

AMENDMENTS TO THE CLAIMS:

1. (Currently Amended) A cellular telephone ~~set capable of displaying still images on a display screen, set, wherein:~~
said set displaying displays an image display screen displaying still images in a thumbnail form so that contents of images can be seen at a ~~glance~~glance; and
said set displays a frame display screen displaying still images selected on the image display screen for animation display per frame number in a thumbnail form,
the image display screen and the frame display screen being displayed simultaneously with each other.
2. (Previously Presented) The cellular telephone set as set forth in claim 1, wherein said still images comprise still images consecutively picked up by a consecutive photographing function using a digital camera.
3. (Previously Presented) The cellular telephone set as set forth in claim 2, wherein a plurality of still images consecutively picked up by said consecutive photographing function are displayed in said image display screen, and
the still images selected on the image display screen are displayed in said frame display screen and registered as an animation.
4. (Original) The cellular telephone set as set forth in claim 3, wherein a reproduction

speed of said still images registered as animation is variable.

5. (Previously Presented) The cellular telephone set as set forth in claim 3, wherein a repeat setting in said still images registered as animation is variable.

6. (Currently Amended) A self-produced animation setting method of consecutive images ~~of in a cellular telephone capable of displaying still image on a display screen, set, said~~ method comprising:

displaying an image display screen displaying still images in thumbnail form so that contents of images can be seen at a glance; and

displaying a frame display screen displaying still images selected on said image display screen for animation display per frame number in a thumbnail form,

said frame display screen being displayed simultaneously with a display on said image display screen.

7. (Previously Presented) The self-produced animation setting method as set forth in claim 6, wherein said still images comprise still images consecutively picked up by a consecutive photographing function using a digital camera.

8. (Previously Presented) The self-produced animation setting method as set forth in claim 7, wherein

a plurality of still images consecutively picked up by said consecutive photographing

function are displayed in said image display screen, and

the still images selected on the image display screen are displayed in said image display screen and registered as an animation.

9. (Original) The self-produced animation setting method as set forth in claim 8, wherein a reproduction speed of said still images registered as animation is variable.

10. (Previously Presented) The self-produced animation setting method as set forth in claim 8, wherein a repeat setting in said still images registered as animation is variable.

11. (Currently Amended) A computer executable program stored in a cellular telephone which, when executed, causes an enactment of a self-produced animation setting method of consecutive images ~~of in a cellular telephone capable of displaying still image on a display screen, set,~~ said method comprising:

displaying an image display screen displaying still images in a thumbnail form so that contents of images can be seen at a glance; and

displaying a frame display screen displaying still images selected on said image display screen for animation display per frame number in a thumbnail form,

said frame display screen being displayed simultaneously with display on said image display screen.

12. (Original) The program as set forth in claim 11, wherein said still images are still

images consecutively picked up by a consecutive photographing function using a digital camera.

13. (Previously Presented) The program as set forth in claim 12, wherein
a plurality of still images consecutively picked up by said consecutive photographing function are displayed in said image display screen, and
the still images selected on the image display screen are displayed in said frame display screen and registered as an animation.
14. (Original) The program as set forth in claim 13, wherein a reproduction speed of said still images registered as animation is variable.
15. (Previously Presented) The program as set forth in claim 13, wherein a repeat setting in said still images registered as animation is variable.
